

**Meycor COBIT Delphos** is a strategic indicators manager, usually known as Balanced Scorecard, that allows you to view, in a very simple way, the current strategic status of your organization, greatly easing monitoring and follow-up tasks.

**Meycor COBIT Delphos** benefits:

- Allows to implement entirely, in a very simple and solid way, an Enterprise Balanced Scorecard.
- Provides objectives, goals and indicators in a completely integrated and coherent way with the organization's strategy.
- It is also possible to specify joint or individual action plans for each objective and/or goal of the model, for an appropriate monitoring and follow-up.

**Meycor COBIT Delphos** includes an alert system and automatic e-mail messaging facilities, allowing designated users to be informed of a situation that requires their attention.

**Delphos Manager** interfaces directly with the multidimensional analysis tool **Apoyo**, the reports generator **Matrix**, the business models designer **DEINSA Funcion@**, and MS Project®, MS Excel®, MS Word® and several other applications. This means that the user will always be able to obtain the necessary level of detail. In this sense **Delphos Manager** is a unique tool worldwide, and it faithfully implements what Peter Drucker defines as a true information management system.

Using cause-effect analyses and scenario design, Management will be able to evaluate the alignment among the different model indicators.

With **Meycor COBIT Delphos**, your organization will be at the cutting edge of strategic management, allowing the implementation of the best practices in today's management.

**Meycor COBIT Delphos** Implements a Balanced Scorecard, in agreement with international standards, especially those issued by Balanced Scorecard Collaboratives Inc.

The software allows you to define models, mission, vision, observations, perspectives, objectives, goals, indicators, action plans, responsible parties, charts, scenarios, cause-effect relationships, and all types of related documents.

**Meycor COBIT Delphos** is based on Client/Server architecture, additionally allowing universal connectivity to any database type, either relational or multidimensional, feeding the indicators directly from its original data source, making unnecessary to re-type any data, maintaining your strategic information whole and updated, in a completely automated way.

**Delphos Manager** was developed by **DEINSA**, founded in 1990, being one of the founding companies of Caprosoft and leader at Latin American level in management systems implementation. **Delphos Manager** was developed entirely in Microsoft Visual Studio®, completely oriented to objects.

The software includes SQL and MDX wizards, impressively simple to use and yet powerful at the same time, allowing you to feed indicators directly from different data sources: ORACLE®, MS SQL SERVER®, SYBASE®, INFORMIX® and others.

For indicators creation, based on other indicators, it has a very robust formula generator, including many other characteristics that makes it a unique tool worldwide.

## Minimum Requirements

- 500 MHz Pentium III (or higher).
- Windows 2000 (or higher).
- 128 MB RAM (256 MB recommended).
- 300 MB free hard disk space.
- 150 MB of virtual memory (or more depending on the volume of transactions).
- Super VGA (800x600), small fonts.
- Internet Explorer 5 or higher.
